Authorized Persons	Mr. Albin Ealias, Mr. Akash Singh
Designation	Managing Partners

A structured, scalable delivery model for government, enterprise, subcontract, module-based, AMC, and maintenance support engagements.

Company Overview

M/s ASBAE Technologies is a government-focused IT services and software solutions firm engaged in software development, web portal implementation, workflow automation systems, GIS application support, MIS and dashboard development, PMO support services, deployment assistance, and long-term maintenance engagements.

The organization operates through a structured and scalable delivery model designed to support government departments, institutions, implementation agencies, prime vendors, and enterprise clients through project-based, module-based, subcontracted, and resource mobilization engagements.

Company Profile

Particular	Details
Firm Name	M/s ASBAE Technologies
Registered Address	D-05, 1st Floor, 5/588, Vikas Khand, Gomti Nagar, Lucknow, Uttar Pradesh - 226010
Email	info@asbaetech.in
Website	asbaetech.in
Authorized Persons	Mr. Albin Ealias, Mr. Akash Singh
Designation	Managing Partners
Business Area	IT Services, Software Development, Web Portal Development, GIS Application Support, MIS, Dashboard Development, Functional Analysis, PMO Support, Deployment and Maintenance
Engagement Type	Project-based / Module-based / Subcontract / Resource Mobilization / AMC / Maintenance Support

Organizational Structure & Core Team

The core team is designed to provide daily delivery control, technical execution, project governance, quality validation, deployment support, and operational continuity.

Role	Count	Key Responsibilities
Managing Partners	2	Strategic leadership, business development, client relationship management, commercial oversight, partnership coordination, and organizational governance.
Project Manager	1	Project planning, milestone tracking, delivery governance, client coordination, reporting, risk monitoring, and execution control.
PMO / Project Coordinator	1	MOM tracking, document control, approval follow-ups, reporting support, task tracking, and project administration.
Tech Lead	1	Technical architecture, solution planning, development supervision, code review, technical decision-making, and quality control.
Full-Stack Developers	4	Front-end and backend development, API integration, database connectivity, module implementation, debugging, and feature enhancement.
Backend Developer	1	Server-side development, APIs, authentication systems, database operations, integrations, and performance optimization.
Front-End Developer	1	Responsive UI development, dashboard interfaces, portal pages, and client-side integration.
UI/UX Developer	1	Wireframes, user journey design, interface layouts, usability enhancement, and design consistency.
Business Analyst	1	Requirement gathering, SRS preparation, workflow mapping, scope documentation, and stakeholder coordination.
QA Tester	1	Functional testing, regression testing, bug tracking, UAT coordination, and quality validation.
DevOps Engineer	1	Server setup, deployment automation, CI/CD support, monitoring, infrastructure support, and backup management.
Support / Implementation Engineer	1	Deployment support, implementation assistance, operational issue handling, and user coordination.
Total Core Team Strength	15	Structured end-to-end execution capability.

On-Demand Specialist Support

On-demand specialist support enables project-specific scalability without increasing fixed overhead for every engagement.

Role	Model	Purpose
Security & Compliance Consultant	On-Demand	Security review, compliance advisory, audit coordination, VAPT support, and infrastructure security guidance.
Technical Writer / Documentation Specialist	On-Demand	SRS support, SOPs, user manuals, deployment guides, UAT documentation, training materials, and handover documents.
Database Specialist / DBA	On-Demand	Database optimization, migration, backup strategy, complex database design, and performance tuning.
Additional QA Testers	On-Demand	Support during large testing cycles, UAT, regression testing, and multi-module releases.
Additional Developers	On-Demand	Added based on project scope, parallel module development, delivery timelines, and execution requirements.
Domain / Functional Consultant	On-Demand	Sector-specific advisory support for GIS, education, revenue, finance, land records, and workflow systems.
Training / Field Support Staff	On-Demand	User training, rollout assistance, district-level deployment, AMC support, and implementation support.

Capability Overview

- Requirement analysis, feasibility review, workflow mapping, and scope documentation.
- UI/UX design, solution architecture, application development, API integration, and database connectivity.
- Testing, deployment, DevOps support, documentation coordination, user training, implementation support, and maintenance.

Statement of Capability

M/s ASBAE Technologies possesses the organizational structure, technical capability, project governance framework, and scalable resource model required for professional execution of government and enterprise IT projects.

The company's core delivery team ensures day-to-day execution control, while its on-demand specialist network provides additional support for security, documentation, database optimization, domain consulting, training, and large-scale implementation requirements.

This execution model enables the organization to deliver projects with accountability, operational control, quality assurance, flexibility, and scalable execution capability across project lifecycles.
