

M/s ASBAE Technologies

Technical Capability & Resource Mobilization Statement

For Software Development, Web Portal Development, GIS Applications, MIS, Functional Analysis, PMO Support and IT Project Execution

Registered Office	D-05, 1st Floor, 5/588, Vikas Khand, Gomti Nagar, Lucknow, Uttar Pradesh - 226010
Email	info@asbaetech.in
Website	asbaetech.in
Authorized Persons	Mr. Albin Ealias, Mr. Akash Singh
Designation	Managing Partners

Professional capability submission document for project discussion, prime vendor evaluation and client review.

TECHNICAL CAPABILITY & RESOURCE MOBILIZATION STATEMENT

For Software Development, Web Portal Development, GIS Applications, MIS, Functional Analysis, PMO Support and IT Project Execution

M/s ASBAE Technologies

1. Company Snapshot

Particular	Details
Firm Name	M/s ASBAE Technologies
Registered Address	D-05, 1st Floor, 5/588, Vikas Khand, Gomti Nagar, Lucknow, Uttar Pradesh - 226010
Email	info@asbaetech.in
Website	asbaetech.in
Authorized Persons	Mr Albin Ealias, Mr Akash Singh
Designation	Managing Partners
Business Area	IT Services, Software Development, Web Portal Development, GIS Application Support, MIS, Dashboard Development, Functional Analysis, PMO Support, Deployment and Maintenance
Engagement Type	Project-based / Module-based / Subcontract / Resource Mobilization / AMC / Maintenance Support

2. Document Control

Particular	Details
Document Title	Technical Capability & Resource Mobilization Statement
Company	M/s ASBAE Technologies
Version	1.0
Prepared By	M/s ASBAE Technologies
Purpose	Capability submission / project discussion / prime vendor evaluation / client review

3. Executive Summary

M/s ASBAE Technologies is an information technology services and software execution firm capable of supporting structured IT project delivery across software development, web portal development, GIS-enabled applications, MIS systems, dashboard development, backend and frontend development, database-driven applications, API integration, business analysis, functional documentation, technical

documentation, testing, deployment coordination, user training, PMO support, and post-deployment maintenance.

The firm is positioned to support government, semi-government, institutional, private-sector, and prime-vendor-led IT assignments. ASBAE Technologies can operate as a technology execution partner, subcontract execution partner, module development partner, functional analysis support partner, resource mobilization partner, documentation support agency, testing and UAT support agency, GIS application support partner, and PMO-supported delivery partner.

ASBAE Technologies brings together technical execution capability, functional analysis capability, resource mobilization readiness, project coordination discipline, documentation control, milestone tracking, dependency management, testing support, deployment readiness, and structured communication practices to support IT project execution.

The firm can support assignments from requirement understanding to development, testing, deployment, handover, training, and maintenance, subject to approved scope, agreed commercial terms, availability of client / prime vendor dependencies, resource availability, and formal project approvals.

4. Purpose of This Capability Statement

This capability statement is prepared to present the technical, functional, operational, project coordination, and resource mobilization capability of M/s ASBAE Technologies.

This document may be used for:

Capability submission to clients

Capability submission to prime vendors

Subcontracting discussions

Project assignment discussions

Module development proposals

Web portal development proposals

GIS application development proposals

MIS and dashboard development proposals

Business process application support discussions

Software maintenance and support proposals

PMO and documentation support proposals

Resource mobilization discussions

Tender / pre-tender capability review

Client department evaluation

Technical execution planning

Commercial and milestone discussion support

5. Capability Positioning

ASBAE Technologies can contribute to IT and software projects in multiple execution roles.

5.1 Technology Execution Partner

ASBAE Technologies can support software design, development, integration, testing, deployment, and support activities for web-based, database-driven, dashboard-based, workflow-based, business process, and GIS-enabled systems.

5.2 Module Development Partner

The firm can undertake specific modules within a larger project, such as login module, admin module, dashboard module, reporting module, user management module, API module, GIS module, document management module, notification module, functional workflow module, or approval workflow module.

5.3 Prime Vendor Support Partner

ASBAE Technologies can support prime vendors in execution of assigned IT scope, including development support, requirement documentation, technical documentation, milestone tracking, testing support, UAT coordination, deployment coordination, training support, issue tracking, and post-deployment support.

5.4 Subcontract Execution Partner

The firm can work under subcontract or project assignment arrangements for defined scope, milestone-linked delivery, module execution, technical support, functional documentation, testing, deployment, and maintenance services.

5.5 GIS and Portal Development Support Partner

ASBAE Technologies can support GIS-enabled portals, map-based dashboards, location-based reporting systems, departmental portals, MIS systems, public-facing portals, internal workflow portals, and admin-controlled applications.

5.6 Business Analysis and Functional Support Partner

ASBAE Technologies can support requirement gathering, stakeholder coordination, process mapping, gap analysis, user story preparation, acceptance criteria preparation, functional documentation, UAT scenario preparation, issue logging, signoff coordination, and SDLC documentation through mobilized functional resources.

5.7 Resource Mobilization Partner

ASBAE Technologies can mobilize technical and functional resources based on available resource profiles, professional credentials, relevant technical exposure, role suitability, and project requirements.

5.8 PMO and Documentation Support Partner

The firm can support project governance through scope tracking, milestone tracking, dependency tracking, issue tracking, risk register maintenance, approval tracking, UAT tracking, communication tracking, payment trigger tracking, and closure documentation.

5.9 Testing, Deployment and Maintenance Support Partner

ASBAE Technologies can support internal testing, UAT coordination, deployment readiness, server coordination, go-live support, user training, bug fixing, minor enhancements, support reporting, and maintenance coordination.

6. Resource Mobilization Statement

ASBAE Technologies can mobilize technical and functional resources based on available resource profiles, professional credentials, relevant technical exposure, and project requirements.

Resource profiles may be considered for evaluating role-wise suitability, technical exposure, functional exposure, deployment readiness, and manpower availability. These profiles shall be treated only as supporting documents for resource mobilization and shall not be treated as completed project experience of ASBAE Technologies unless supported by valid work orders, agreements, completion certificates, invoices, client certificates, or other formal project execution records.

ASBAE Technologies may mobilize suitable resources for:

1. Software development
2. Web portal development
3. Backend development
4. Frontend development
5. Database handling
6. API development
7. GIS application support
8. Dashboard development
9. MIS reporting
10. Business analysis
11. Functional documentation
12. Technical documentation
13. Testing and UAT support
14. Deployment coordination
15. User training
16. PMO activities
17. Maintenance and support services

Final resource deployment shall depend on project scope, technical stack, timeline, commercial terms, resource availability, and client / prime vendor approval.

7. Important Capability Clarification

ASBAE Technologies maintains a clear and professional distinction between company capability, resource profile capability, and company project experience.

7.1 Company Capability

Company capability refers to ASBAE Technologies' ability to plan, coordinate, mobilize, execute, document, track, test, deploy, support, and manage IT assignments through structured project execution and resource coordination.

7.2 Resource Profile Capability

Resource profile capability refers to the technical exposure, functional exposure, educational background, professional credentials, project-role exposure, tools knowledge, development skills, documentation capability, and deployment suitability of proposed resources who may be mobilized by ASBAE Technologies.

7.3 Company Project Experience

Company project experience shall mean only those projects that are supported by formal documentation such as valid work orders, project assignment confirmations, agreements, completion certificates, invoices, client certificates, or other official records.

7.4 Safe Representation Principle

This capability statement does not convert individual resource exposure into direct completed project experience of ASBAE Technologies unless such experience is supported by formal project records. Resource profiles shall be used only for demonstrating resource mobilization capability, technical-functional suitability, and deployment readiness.

8. Core Service Areas

ASBAE Technologies can provide support across the following service areas.

8.1 Web Application Development

ASBAE Technologies can support design, development, testing, deployment, and maintenance of web-based software applications.

8.1.1 Types of Web Applications

The firm can contribute to:

1. Government web applications
2. Departmental portals
3. Review and monitoring systems
4. MIS applications
5. Dashboard-based applications
6. Workflow management systems
7. Approval tracking systems

8. Public-facing service portals
9. Internal business applications
10. Data entry and verification systems
11. Document management systems
12. User management applications
13. Role-based access platforms
14. Reporting and analytics systems
15. Module-based enterprise applications
16. Data validation and reporting applications

8.1.2 Web Application Features

ASBAE Technologies can support development of features such as:

1. Login and authentication
2. User registration
3. Role-based access
4. Department mapping
5. Section-wise access
6. Application form submission
7. Workflow approval
8. Data validation
9. File upload and download
10. Search and filter
11. Dashboard view
12. Report generation
13. Export functionality
14. Audit trail
15. Notification support
16. Admin controls
17. Master data management
18. User activity tracking
19. Status monitoring
20. Final submission and signoff workflow

8.1.3 Execution Approach

Web application development can be executed through:

1. Requirement understanding
2. Scope confirmation
3. Module identification
4. Technology stack finalization
5. UI planning
6. Database planning
7. API planning
8. Development environment setup
9. Module-wise development
10. Internal testing
11. UAT support
12. Deployment coordination
13. Training and handover
14. Maintenance support

8.2 Portal Development

ASBAE Technologies can support complete or module-wise portal development for government departments, private organizations, institutions, agencies, and prime-vendor-led projects.

8.2.1 Portal Types

The firm can support:

1. Department portals
2. Citizen service portals
3. Internal workflow portals
4. Review application portals
5. Monitoring portals
6. Admin portals
7. Data collection portals
8. Document submission portals
9. GIS-enabled portals
10. Dashboard portals

11. Training and support portals
12. Inspection and reporting portals
13. Approval management portals
14. Multi-user role portals

8.2.2 Portal Modules

ASBAE Technologies can develop or support modules such as:

1. User registration module
2. Login module
3. Admin panel
4. User role module
5. Department mapping module
6. Master data module
7. Application submission module
8. Document upload module
9. Verification module
10. Approval module
11. Dashboard module
12. Reporting module
13. Search module
14. Notification module
15. Audit trail module
16. Feedback module
17. Helpdesk module
18. GIS map module, wherever applicable
19. Export and download module
20. User training module
21. UAT observation module, wherever applicable
22. Issue tracking / support module, wherever applicable

8.2.3 Portal Execution Support

The firm can support:

1. Scope finalization
2. Functional requirement mapping
3. User role mapping
4. Screen flow preparation
5. Backend API development
6. Frontend screen development
7. Database design support
8. Report and dashboard creation
9. Integration support
10. Testing and issue tracking
11. UAT coordination
12. Deployment readiness
13. User training
14. Post-go-live support

8.3 Backend Development

ASBAE Technologies can support backend development for secure, scalable, and database-driven applications.

8.3.1 Backend Activities

The firm can mobilize resources for:

1. REST API development
2. Business logic implementation
3. Database connectivity
4. Authentication handling
5. Authorization handling
6. Role-based access control
7. Form validation
8. Data processing
9. Workflow logic
10. Approval logic
11. Report generation logic
12. Third-party API integration

13. Notification service integration
14. Error logging
15. Audit trail handling
16. API testing
17. Backend security support
18. Performance optimization support
19. Data migration support
20. Backend maintenance

8.3.2 Backend Use Cases

Backend development can support:

1. User management systems
2. Login and authentication systems
3. Admin control systems
4. MIS applications
5. Document workflow systems
6. GIS data-linked systems
7. Dashboard applications
8. Reporting applications
9. Approval workflow systems
10. API-driven service platforms
11. Data processing systems
12. Integration-heavy applications
13. Data validation and rule-based processing systems

8.3.3 Backend Quality Considerations

Backend work may include:

1. Clean code practices
2. Layered architecture
3. Secure API design
4. Role-based data access
5. Proper validation
6. Structured error handling

7. Database optimization
8. API response consistency
9. Maintainable code structure
10. Documentation of APIs and workflows

8.4 Frontend Development

ASBAE Technologies can support frontend development for modern, responsive, and user-friendly web applications.

8.4.1 Frontend Activities

The firm can support:

1. Web page development
2. Dashboard screen development
3. Admin panel screen development
4. Data entry form development
5. Report screen development
6. User profile screen development
7. Workflow screen development
8. Search and filter page development
9. Mobile-responsive interface development
10. Form validation display
11. Table and grid display
12. Graph and chart display
13. Menu and navigation design
14. Bilingual interface support, wherever required
15. UI integration with backend APIs

8.4.2 Frontend Objectives

Frontend development shall focus on:

1. Usability
2. Responsiveness
3. Clarity of navigation
4. Role-wise access visibility
5. Clean screen flow

6. User-friendly data entry
7. Proper error message display
8. Report readability
9. Dashboard clarity
10. Compatibility with approved browsers and devices

8.5 Business Analysis, Functional Documentation and Requirement Management

ASBAE Technologies can support functional analysis and requirement management activities for software and IT projects by mobilizing suitable business analysis resources.

The firm can assist in translating business needs into clear functional requirements for developers, testers, project coordinators, approval authorities, and client stakeholders.

8.5.1 Business Analysis Capability

ASBAE Technologies can support:

1. Requirement gathering
2. Requirement clarification
3. Stakeholder interviews
4. Stakeholder coordination
5. Business process mapping
6. Workflow understanding
7. Gap analysis
8. Use case preparation
9. User story preparation
10. Acceptance criteria preparation
11. Requirement documentation
12. Functional documentation
13. Functional specification support
14. Process improvement identification
15. SDLC documentation support

8.5.2 Agile and PMO Functional Support

The firm can support Agile and PMO-related activities such as:

1. Sprint planning support
2. Backlog grooming support
3. Daily stand-up coordination support

4. Sprint review support
5. Retrospective coordination support
6. Task tracking
7. Documentation support
8. Sprint progress documentation
9. Development pattern analysis
10. Bottleneck identification
11. UAT readiness tracking
12. Signoff tracking

8.5.3 UAT and Functional Testing Support

ASBAE Technologies can support:

1. UAT scenario preparation
2. Acceptance test scenario preparation
3. Business requirement validation
4. Functional testing coordination
5. Regression testing coordination
6. Issue logging
7. Defect tracking
8. UAT observation response support
9. Stakeholder signoff coordination
10. Production deployment readiness support

8.5.4 Data and Reporting Support

The firm may mobilize resources with exposure to:

1. SQL-based data validation
2. Spreadsheet-based reporting
3. Dashboard reporting exposure
4. Data analysis
5. Sprint metric analysis
6. Operational data validation
7. Business reporting support

8.6 GIS and Mapping Support

ASBAE Technologies can support GIS-enabled IT assignments involving location-based systems, map-linked dashboards, geo-tagged asset management, spatial data visualization, and GIS-integrated MIS applications.

8.6.1 GIS Support Areas

The firm can support:

1. GIS portal development
2. Map-based dashboard support
3. Layer-wise data visualization
4. Geo-tagged asset display
5. Location-based reporting
6. GIS data integration support
7. Map-linked MIS modules
8. Spatial data coordination
9. Shapefile handling support, wherever provided
10. Boundary and layer visualization
11. Location-wise filtering
12. Asset mapping modules
13. GIS-based monitoring systems
14. Web-based map display modules
15. Integration of GIS layers with application data

8.6.2 GIS Use Cases

ASBAE Technologies can contribute to GIS-related solutions for:

1. Asset mapping
2. Department monitoring
3. Field inspection tracking
4. Location-wise reporting
5. Public infrastructure monitoring
6. Land / area-based data visualization
7. Municipal or urban data systems
8. Project progress mapping
9. Service delivery visualization

10. Geo-enabled dashboards

8.6.3 GIS Dependencies

GIS execution may depend on:

1. Availability of GIS data
2. Availability of shapefiles
3. Availability of coordinates
4. Base map requirements
5. Layer requirements
6. Hosting environment
7. Data accuracy
8. Client approval
9. Third-party map service conditions
10. Scope of GIS integration

8.7 Dashboard, MIS and Reporting

ASBAE Technologies can support management dashboards, MIS systems, operational reports, analytical views, and data-driven decision support systems.

8.7.1 Dashboard Types

The firm can support:

1. Department-wise dashboards
2. Role-wise dashboards
3. Management dashboards
4. Performance dashboards
5. Application status dashboards
6. Review dashboards
7. Approval dashboards
8. GIS dashboards
9. Project monitoring dashboards
10. User activity dashboards
11. SLA dashboards
12. Issue tracking dashboards
13. Training progress dashboards

14. Maintenance support dashboards

8.7.2 Reporting Features

Reports may include:

1. Summary reports
2. Detailed reports
3. Date-wise reports
4. User-wise reports
5. Department-wise reports
6. District-wise reports
7. Category-wise reports
8. Status-wise reports
9. Role-wise reports
10. Exportable reports
11. Printable reports
12. Graphical reports
13. Tabular reports
14. Exception reports
15. Approval pending reports
16. UAT observation reports
17. Sprint progress reports

8.7.3 Dashboard Development Support

ASBAE Technologies can support:

1. Data source identification
2. Report requirement mapping
3. Dashboard wireframe planning
4. Chart and table development
5. Filter and search development
6. Role-wise dashboard access
7. Backend report logic
8. Export function support
9. Report testing

10. MIS documentation

8.8 Admin Panel and User Role Management

ASBAE Technologies can support admin panel development and role-based access systems.

8.8.1 Admin Panel Features

The firm can support:

1. Admin login
2. Admin dashboard
3. User creation
4. User approval
5. User status control
6. Role creation
7. Permission mapping
8. Department mapping
9. Section mapping
10. Master data management
11. Configuration settings
12. Password reset support
13. Activity logs
14. Audit trail
15. Notification control
16. Data export control
17. Report access control
18. Module enable / disable control
19. Approval authority mapping
20. System monitoring view

8.8.2 Role-Based Access

The firm can support access structures such as:

1. Super Admin
2. Department Admin
3. Section User
4. Data Entry User

5. Verifier
6. Approver
7. Viewer
8. Reporting User
9. GIS User
10. Support User

Final role structure shall depend on project requirement and approved workflow.

8.9 API Integration and System Integration

ASBAE Technologies can support integration of internal modules, external systems, third-party APIs, notification services, and existing databases.

8.9.1 Integration Areas

The firm can support:

1. REST API integration
2. Third-party API integration
3. SMS gateway coordination
4. Email notification integration
5. Existing system integration
6. Database integration
7. Inter-module integration
8. Data migration support
9. Authentication integration
10. Report data integration
11. GIS data integration
12. API testing
13. Error handling
14. Integration documentation

8.9.2 Integration Dependencies

Integration work may depend on:

1. API documentation
2. API credentials
3. Sandbox access

4. Production access
5. Security approval
6. Data format confirmation
7. Third-party service availability
8. Client-side technical support
9. Testing environment
10. Final integration approval

8.10 Data, Analytics and Automation Support

ASBAE Technologies may support data and analytics-related activities based on project requirements and resource availability.

8.10.1 Data Support Areas

The firm can support:

1. Data analysis
2. Data validation workflows
3. SQL-based reports
4. Dashboard analytics
5. MIS data processing
6. Data cleaning support
7. Data extraction support
8. Data transformation support
9. Data loading support
10. Status-wise analysis
11. Category-wise analysis
12. Automated report generation
13. Analytical proof-of-concept support

8.10.2 Automation Support

The firm can support automation in:

1. Report generation
2. Notification workflows
3. Approval reminders
4. Data validation checks

- 5. Status updates
- 6. Dashboard refreshes
- 7. Issue tracking
- 8. UAT tracking
- 9. Payment milestone tracking
- 10. Project document tracking

9. Technology, Tool and Functional Exposure

Based on available resource profiles and project execution requirements, ASBAE Technologies may mobilize resources with exposure to the following technology, tool, and functional areas.

Category	Technology / Tools / Exposure
Backend	.NET Core, ASP.NET Web API, C#, Java, Python
Frontend	Angular, HTML, CSS, JavaScript, TypeScript, Bootstrap
Database	SQL Server, MySQL, PostgreSQL, Oracle, NoSQL databases
API	REST APIs, third-party APIs, secure APIs
Authentication	JWT, role-based authorization, access control
Business Analysis	Requirement gathering, workflow mapping, requirement documentation, user stories, acceptance criteria
PMO / Agile	Agile, Scrum, sprint planning, backlog grooming, task tracking
Data / Reporting	SQL, spreadsheet reporting, dashboard reporting, data analysis
Cloud / DevOps	Azure, AWS, CI/CD exposure
Documentation	Requirement documents, functional documents, release notes, UAT documents, user guides
Testing	UAT, functional testing, regression testing, automation testing exposure

The final technology stack, tools, and methodology shall be selected based on approved scope, client standards, security requirements, hosting environment, development feasibility, integration needs, timeline, and prime vendor / department instructions.

10. Delivery Governance and PMO Capability

ASBAE Technologies can support project governance through a structured PMO approach.

Governance Area	ASBAE Technologies Support
Scope Governance	Scope confirmation, exclusions, assumptions, change request tracking

Requirement Governance	Requirement clarification, functional documentation support, user stories, acceptance criteria
Delivery Governance	Milestone tracking, task tracking, deliverable tracking
Dependency Governance	Client input tracker, API / server / GIS data dependency tracking
Risk Governance	Risk register, issue register, escalation support
Quality Governance	Test cases, issue tracking, UAT observation closure
Communication Governance	Status updates, approval requests, meeting notes
Commercial Governance	Payment milestone trigger tracking and submission support
Closure Governance	Handover documents, signoff request, closure report

This governance approach helps reduce execution gaps and provides clear visibility to the client / prime vendor during the project lifecycle.

11. Documentation Capability

ASBAE Technologies can prepare, coordinate, and maintain documents required during different phases of IT project execution.

11.1 Pre-Development Documents

1. Requirement understanding note
2. Scope confirmation note
3. Project kickoff note
4. Dependency list
5. Stakeholder list
6. Module list
7. Assumption and exclusion note
8. Requirement clarification list
9. Functional flow note
10. Initial execution plan

11.2 Requirement and Design Documents

1. Software Requirement Specification
2. System Requirement Specification
3. Functional Requirement Specification
4. Business Process Document
5. Business Requirements Document
6. Functional Requirements Document

7. System Design Document
8. Technical architecture note
9. Database design note
10. API design note
11. UI screen flow note
12. User role matrix
13. Workflow matrix
14. Process flow, wherever applicable
15. User stories and acceptance criteria
16. Report requirement list
17. Integration requirement list
18. GIS data requirement list, wherever applicable

11.3 Development and Testing Documents

1. Development plan
2. Sprint plan
3. Module completion report
4. API documentation
5. Test plan
6. Test cases
7. UAT scenarios
8. Test result report
9. Bug report
10. Issue register
11. UAT submission document
12. UAT observation tracker
13. UAT closure note
14. Release notes

11.4 Deployment and Handover Documents

1. Deployment readiness checklist
2. Server dependency checklist
3. Go-live readiness note

4. Production deployment note

5. User manual

6. Admin manual

7. Training material

8. Handover document

9. Closure report

10. Final signoff note

11.5 Maintenance Documents

1. Support request register

2. Bug fix report

3. Change request register

4. Monthly support report

5. SLA tracking sheet, wherever applicable

6. Maintenance activity report

7. Version update note

8. Support closure note

12. Testing, UAT and Quality Assurance Capability

ASBAE Technologies can support testing, UAT, and quality assurance throughout the project lifecycle.

12.1 Testing Types

1. Functional testing

2. Module testing

3. API testing

4. Integration testing

5. Regression testing

6. Form validation testing

7. Role-based access testing

8. Report testing

9. Dashboard testing

10. GIS layer testing, wherever applicable

11. UAT support

12. Deployment verification testing

13. Acceptance test scenario validation

12.2 QA Activities

The firm can support:

1. Test case preparation
2. Test scenario identification
3. Test data coordination
4. Bug identification
5. Bug reporting
6. Issue classification
7. Issue tracking
8. Developer coordination
9. Retesting
10. UAT observation tracking
11. UAT support
12. Testing closure report

12.3 UAT Support

ASBAE Technologies can assist in:

1. Preparing UAT build
2. Preparing UAT test scenarios
3. Supporting client / prime vendor users
4. Capturing UAT observations
5. Categorizing issues
6. Resolving approved observations
7. Submitting response against observations
8. Preparing UAT closure note
9. Supporting stakeholder signoff
10. Supporting final production deployment readiness

13. Deployment and Hosting Support

ASBAE Technologies can support application deployment and go-live coordination.

13.1 Deployment Support Activities

1. Development environment setup

2. Staging environment coordination
3. Production deployment coordination
4. Database setup coordination
5. Server access coordination
6. Hosting support coordination
7. SSL / domain coordination
8. Configuration file setup
9. Build preparation
10. Deployment checklist preparation
11. Go-live readiness verification
12. Production validation
13. Initial monitoring
14. Post-deployment bug support

13.2 Infrastructure Dependency

Deployment support may depend on:

1. Server availability
2. Hosting environment readiness
3. Database access
4. Domain details
5. SSL certificate details
6. API credentials
7. GIS data access, wherever applicable
8. Security approval
9. Production access
10. Client / prime vendor technical coordination

13.3 Deployment Responsibility Clarification

The exact responsibility for hosting, cloud services, server rental, security audit, backup system, domain, SSL, database server, and infrastructure monitoring shall be based on approved scope and commercial terms.

14. Training and User Support Capability

ASBAE Technologies can support user training and operational handholding.

14.1 Training Support

The firm can support:

1. Admin training
2. End-user training
3. Department-wise training
4. Section-wise training
5. Online training
6. On-site training, wherever agreed
7. Training material preparation
8. User manual explanation
9. Demonstration of modules
10. Training attendance tracking
11. Feedback collection
12. Post-training support

14.2 User Support

The firm can provide:

1. Helpdesk coordination
2. Issue logging
3. Basic user guidance
4. Application usage support
5. Bug escalation
6. Training reinforcement
7. Operational handholding
8. Report generation assistance
9. Admin support
10. Initial go-live support

15. Operations and Maintenance Capability

ASBAE Technologies can support post-deployment operations and maintenance.

15.1 Maintenance Activities

1. Bug fixing
2. Minor enhancements
3. User support
4. Data correction support
5. Report modification
6. Dashboard modification
7. API issue support
8. Application monitoring support
9. Server coordination support
10. Backup coordination support
11. Security patch coordination
12. Version update support
13. Change request support
14. Monthly maintenance reporting
15. AMC support

15.2 Change Request Handling

Changes outside the approved scope may be handled as change requests. Change requests may include:

1. New modules
2. New reports
3. New dashboards
4. New user roles
5. New workflows
6. New integrations
7. Major UI changes
8. Additional GIS layers
9. Additional data migration
10. Additional training sessions

Each change request may require scope assessment, effort estimate, timeline revision, commercial approval, and formal confirmation.

16. Execution Methodology

ASBAE Technologies follows a structured execution methodology.

Stage 1: Project Initiation

1. Review project assignment / written confirmation
2. Identify client / prime vendor requirements
3. Understand project background
4. Confirm initial scope boundaries
5. Identify major deliverables
6. Identify stakeholders
7. Identify communication channels
8. Prepare kickoff note
9. Assign internal responsibility
10. Prepare initial dependency list

Stage 2: Requirement Understanding

1. Study available requirement documents
2. Conduct requirement discussions
3. Identify modules
4. Identify workflows
5. Identify user roles
6. Identify reports
7. Identify dashboards
8. Identify integrations
9. Identify GIS requirements, wherever applicable
10. Prepare requirement clarification list

Stage 3: Scope and Requirement Approval

1. Prepare scope summary
2. Prepare requirement document
3. Define included items
4. Define excluded items

5. Define assumptions
6. Define dependencies
7. Define deliverables
8. Define milestone linkage
9. Submit for approval
10. Record approval / confirmation

Stage 4: Design and Planning

1. Prepare module structure
2. Prepare database approach
3. Prepare API approach
4. Prepare frontend approach
5. Prepare dashboard approach
6. Prepare GIS approach, wherever applicable
7. Prepare technology stack note
8. Prepare development plan
9. Prepare testing plan
10. Prepare deployment approach

Stage 5: Development

1. Set up development environment
2. Develop backend APIs
3. Develop frontend screens
4. Configure database
5. Implement validations
6. Implement authentication
7. Implement role-based access
8. Implement workflows
9. Implement dashboards
10. Implement reports
11. Integrate services
12. Conduct developer-level testing

Stage 6: Internal Testing

1. Prepare test cases
2. Conduct module testing
3. Conduct API testing
4. Conduct integration testing
5. Record bugs
6. Assign issues
7. Resolve issues
8. Retest fixed items
9. Prepare internal test report
10. Prepare UAT-ready build

Stage 7: UAT Support

1. Submit UAT build
2. Share UAT test cases
3. Support client / prime vendor users
4. Capture UAT observations
5. Categorize observations
6. Resolve approved issues
7. Submit response against observations
8. Prepare UAT closure note
9. Obtain UAT approval / confirmation

Stage 8: Deployment

1. Prepare deployment checklist
2. Confirm server details
3. Confirm database details
4. Confirm access credentials
5. Prepare production build
6. Deploy application
7. Validate production environment
8. Test critical workflows
9. Support go-live

10. Record deployment completion

Stage 9: Training and Handover

- 1. Prepare user manual
- 2. Prepare admin manual
- 3. Conduct training
- 4. Capture training attendance
- 5. Resolve user doubts
- 6. Submit handover documents
- 7. Submit final deliverables
- 8. Obtain signoff
- 9. Close project stage

Stage 10: Maintenance and Support

- 1. Register support requests
- 2. Classify issues
- 3. Resolve bugs
- 4. Support users
- 5. Submit support reports
- 6. Handle minor enhancements
- 7. Track change requests
- 8. Maintain communication log
- 9. Support closure of maintenance activities

17. Proposed Team / Resource Categories

Depending on project scope, ASBAE Technologies may mobilize the following resource categories.

Resource Category	Possible Responsibility
Project Coordinator / PMO Support	Coordination, tracking, reporting, client communication, documentation
Business Analyst / Functional Support	Requirement gathering, stakeholder coordination, workflow mapping, user stories, functional documentation, UAT support
Technical Lead	Technical planning, architecture guidance, development coordination, review

Backend Developer	APIs, database logic, authentication, business rules, integrations
Frontend Developer	UI screens, forms, dashboards, responsive interface, frontend integration
Full Stack Developer	End-to-end module development, API and UI coordination
Database Developer / Support	Database design, queries, stored procedures, reports, data support
GIS Support Resource	Map modules, GIS data coordination, layer display, location-based reporting
QA / Tester	Test cases, testing, bug reporting, UAT support
Deployment Support Resource	Server coordination, deployment checklist, go-live support
Trainer / Support Executive	User training, user manual explanation, helpdesk support
Documentation Executive	Requirement documents, test documents, manuals, trackers, handover documents

Final team composition shall be based on project size, approved scope, technical stack, timeline, commercial approval, and resource availability.

18. Resource Profile-Based Capability Summary

Based on available resource profiles, ASBAE Technologies can mobilize resources with exposure in:

1. Full stack development
2. Backend development
3. Frontend development
4. REST API development
5. Database handling
6. Dashboard development
7. Authentication and authorization
8. Role-based access systems
9. Business analysis
10. Requirement gathering
11. Process modeling
12. Requirement documentation
13. Functional documentation

14. User story and acceptance criteria preparation
15. Agile / Scrum coordination
16. Task tracking
17. UAT coordination
18. Functional testing and regression testing support
19. SQL-based data validation
20. Dashboard reporting exposure
21. Data analysis
22. Secure web application development
23. API integration
24. Deployment support
25. PMO documentation support
26. Testing and UAT support
27. Web portal development
28. MIS application support

This capability shall be used only as resource mobilization and role suitability support. It shall not be represented as completed ASBAE Technologies project experience unless backed by formal project records.

19. Relevant Work Areas Where ASBAE Technologies Can Contribute

ASBAE Technologies can contribute to the following assignments:

1. Government portal development
2. Departmental web application development
3. MIS application development
4. Digital review application development
5. Dashboard development
6. GIS application development
7. Map-based monitoring systems
8. Admin panel development
9. Workflow automation systems
10. User role management systems
11. API development projects

12. API integration projects
13. Database-driven applications
14. Reporting systems
15. Document management systems
16. Approval tracking systems
17. UAT and testing support
18. Business analysis support
19. Functional documentation support
20. Technical documentation
21. Training and user support
22. PMO and project coordination
23. Deployment coordination
24. Maintenance and AMC support
25. Module development assignments
26. Subcontract execution assignments
27. Resource mobilization assignments

20. Client / Prime Vendor Dependency Management

For timely execution, ASBAE Technologies may require timely inputs from the client / prime vendor.

Sl. No.	Required Input / Dependency	Purpose	To Be Provided By
1	Approved scope / requirement	Scope finalization	Client / Prime Vendor
2	Project assignment / written confirmation	Execution authorization	Client / Prime Vendor
3	User role list	Role-based access design	Client / Prime Vendor
4	Department / section details	Workflow mapping	Client / Prime Vendor
5	Existing system details	Integration / migration planning	Client / Prime Vendor
6	API details / credentials	Integration execution	Client / Prime Vendor
7	GIS data / shapefiles, if applicable	GIS module execution	Client / Prime Vendor
8	Hosting / server details	Deployment planning	Client / Prime Vendor
9	Database access	Development / deployment	Client / Prime Vendor
10	UAT users	UAT execution	Client / Prime Vendor

11	Approval authority details	Signoff process	Client / Prime Vendor
12	Deployment access	Go-live execution	Client / Prime Vendor
13	Final signoff confirmation	Project closure	Client / Prime Vendor
14	Change request approvals	Scope control	Client / Prime Vendor
15	Payment milestone confirmation	Commercial closure	Client / Prime Vendor

21. Deliverables

Depending on the approved scope, ASBAE Technologies can submit the following deliverables.

Sl. No.	Deliverable
1	Requirement understanding note
2	Scope confirmation document
3	Requirement specification document
4	Business Requirements Document, wherever required
5	Functional Requirements Document, wherever required
6	Functional specification document
7	System design note
8	Technical architecture note
9	Database design note
10	API design note
11	UI / screen flow reference
12	User stories and acceptance criteria
13	Process flow, wherever required
14	Frontend modules
15	Backend APIs
16	Database structure
17	Admin panel
18	User role management module
19	Dashboard and reports
20	GIS / map-based modules, if applicable
21	Integration notes
22	Test cases
23	UAT scenarios

24	Test result report
25	Bug / issue tracker
26	UAT submission document
27	UAT closure note
28	Deployment readiness report
29	User manual
30	Admin manual
31	Training material
32	Handover document
33	Closure / signoff document
34	Maintenance support report
35	Change request tracker, wherever applicable

22. Engagement Models

ASBAE Technologies can work under the following engagement models.

22.1 Fixed-Scope Project Execution

Execution based on defined scope, defined deliverables, agreed timeline, and agreed commercial terms.

22.2 Milestone-Based Development

Execution linked to project milestones such as scope approval, development completion, UAT submission, deployment, and signoff.

22.3 Module-Wise Development

Execution of specific modules within a larger project, such as admin panel, dashboard, backend API, frontend screens, GIS module, reporting module, or functional documentation module.

22.4 Subcontract Execution

Support to a prime vendor for execution of assigned scope, subject to agreed responsibility, timeline, confidentiality, documentation, and commercial conditions.

22.5 Resource Deployment Support

Mobilization of suitable technical and functional resources based on available resource profiles, project need, and role suitability.

22.6 PMO-Supported Delivery

Project execution support with structured trackers, milestone monitoring, risk register, issue register, approval tracking, and communication tracking.

22.7 Business Analysis / Functional Support Engagement

Support for requirement gathering, process mapping, requirement documentation, user story creation, UAT coordination, stakeholder coordination, and signoff support.

22.8 Maintenance / AMC Support

Post-deployment support, bug fixing, minor enhancement, user support, report updates, and issue resolution as per agreed terms.

22.9 Change Request-Based Enhancement

Execution of additional features or modifications outside the original scope after formal approval.

23. Payment and Milestone Alignment

ASBAE Technologies can align execution and deliverables with milestone-based payment structures.

Milestone	Typical Payment Trigger
Advance / Project Start	On issue / signing of project confirmation
Scope / Requirement Approval	On approval of scope / requirement document
Functional Approval	On approval of functional documentation, wherever applicable
Design Approval	On approval of design / technical approach, wherever applicable
Development Completion	On completion of assigned modules
Internal Testing Completion	On completion of internal testing
UAT Submission	On submission for UAT / testing
UAT Closure	On closure of UAT observations
Final Deployment	On production deployment / go-live
Final Signoff	On final acceptance / closure
AMC / Maintenance	As per agreed support period

Actual payment percentage, amount, invoice schedule, tax terms, retention, security deposit, payment release timeline, and final payment condition shall be as per agreed commercial terms.

24. Risk Management Capability

ASBAE Technologies can identify, track, and manage common project risks.

24.1 Common Risks

1. Delay in scope approval
2. Delay in client inputs
3. Delay in user role confirmation
4. Delay in API credentials

5. Delay in GIS data availability
6. Delay in hosting / server access
7. Change in requirements
8. UAT observation delay
9. Third-party integration delay
10. Payment milestone delay
11. Resource availability risk
12. Deployment access delay
13. Security audit dependency
14. Data accuracy issues
15. Final signoff delay
16. Delay in stakeholder confirmation
17. Delay in functional approval
18. Workflow change during execution

24.2 Risk Control Measures

1. Maintain dependency tracker
2. Maintain issue register
3. Record approvals in writing
4. Track scope changes
5. Conduct periodic reviews
6. Escalate pending inputs
7. Maintain milestone tracker
8. Prepare UAT tracker
9. Maintain change request log
10. Submit regular status updates
11. Maintain requirement clarification log
12. Maintain signoff tracker

25. Communication and Reporting Capability

ASBAE Technologies can maintain structured communication for project execution.

25.1 Communication Types

1. Project kickoff communication
2. Requirement clarification communication
3. Scope approval communication
4. Functional approval communication, wherever applicable
5. Development start communication
6. Milestone completion communication
7. Testing submission communication
8. UAT submission communication
9. UAT observation response communication
10. Deployment readiness communication
11. Training communication
12. Signoff request communication
13. Payment trigger communication
14. Issue escalation communication
15. Change request communication
16. Maintenance support communication

25.2 Reporting Frequency

Depending on project requirement, reports may be submitted:

1. Daily
2. Weekly
3. Fortnightly
4. Monthly
5. Sprint-wise
6. Milestone-wise
7. On-demand
8. At closure stage

26. Compliance and Submission Readiness

ASBAE Technologies can support preparation and submission of capability and technical documents such as:

1. Company profile
2. Capability statement

3. Resource profiles
4. Team composition
5. Role assignment matrix
6. Task assignment matrix
7. Methodology note
8. Work plan
9. Project execution approach
10. Technology stack note
11. Deployment approach
12. Documentation list
13. Compliance matrix
14. Statutory document list, wherever applicable
15. Declaration formats
16. Scope response document
17. Technical proposal inputs
18. Commercial proposal support
19. Risk and dependency statement
20. Maintenance support approach
21. Functional approach note
22. UAT support plan

27. Limitations and Assumptions

This capability statement is subject to the following assumptions:

1. Final scope shall be based on approved project documents.
2. Any project experience claimed by ASBAE Technologies shall be supported by formal records.
3. Resource profiles shall be used only for resource suitability and deployment readiness.
4. Hosting, server, API credentials, GIS data, and third-party approvals shall be provided by the client /prime vendor unless included in ASBAE Technologies' approved scope.
5. Change requests shall be handled separately from the original approved scope.
6. Final timelines shall depend on scope clarity, dependency availability, approval cycles, and deployment access.
7. Security audit, cloud hosting, SMS charges, third-party service charges, licensing, and statutory compliance costs shall be considered separately unless included in the approved commercial scope.

8. Data accuracy shall depend on the inputs provided by the client / prime vendor.
9. Final acceptance shall depend on approved scope, UAT completion, deployment, and signoff procedure.
10. Maintenance support shall be governed by agreed support terms and SLA, wherever applicable.
11. Process support shall depend on availability of business inputs, process documents, stakeholder access, and approval authority.

28. Key Strengths of ASBAE Technologies

ASBAE Technologies offers the following strengths:

1. Flexible technology execution capability
2. Ability to mobilize technical and functional resources
3. Capability in web portal, MIS, dashboard, and GIS-related assignments
4. Frontend, backend, database, API, and documentation support
5. Business analysis and functional documentation support
6. PMO-based coordination approach
7. Module-wise delivery capability
8. Suitable for prime vendor / subcontract execution
9. Resource profile-backed technical and functional exposure
10. Structured documentation and milestone tracking
11. Focus on delivery, testing, deployment, and closure
12. Ability to support government and institutional IT projects
13. Capability to work under milestone-based execution models
14. Ability to support UAT, training, and handover
15. Capability to support maintenance and AMC requirements
16. Clear distinction between company capability and resource profile-based suitability
17. Strong dependency tracking and approval monitoring approach
18. Structured risk, issue, and change request management
19. Professional communication and reporting discipline.

29. Client / Prime Vendor Value Proposition

ASBAE Technologies provides value to clients and prime vendors by offering:

1. Structured execution support
2. Flexible module-wise delivery capability

- 3. Resource mobilization readiness
- 4. Documentation-backed project management
- 5. Frontend, backend, database, API, dashboard, GIS, and functional analysis support
- 6. Testing, UAT, and deployment coordination
- 7. Clear tracking of scope, dependencies, risks, milestones, and approvals
- 8. Support for government-style documentation and approval cycles
- 9. Ability to work under subcontract, milestone, AMC, module-based, or functional-support models
- 10. Professional distinction between company capability, resource profiles, and formal project experience
- 11. Support for translating business requirements into clear development-ready specifications
- 12. Improved coordination between client stakeholders, technical teams, testers, and approval authorities.

30. Final Declaration

M/s ASBAE Technologies confirms its capability and readiness to support IT project execution through software development, web portal development, GIS application support, MIS and dashboard development, backend and frontend development, API integration, database handling, business analysis, functional documentation, testing, deployment coordination,

31. Signature
